

# Automate for Efficiency with Amazon Transcribe and Amazon Translate

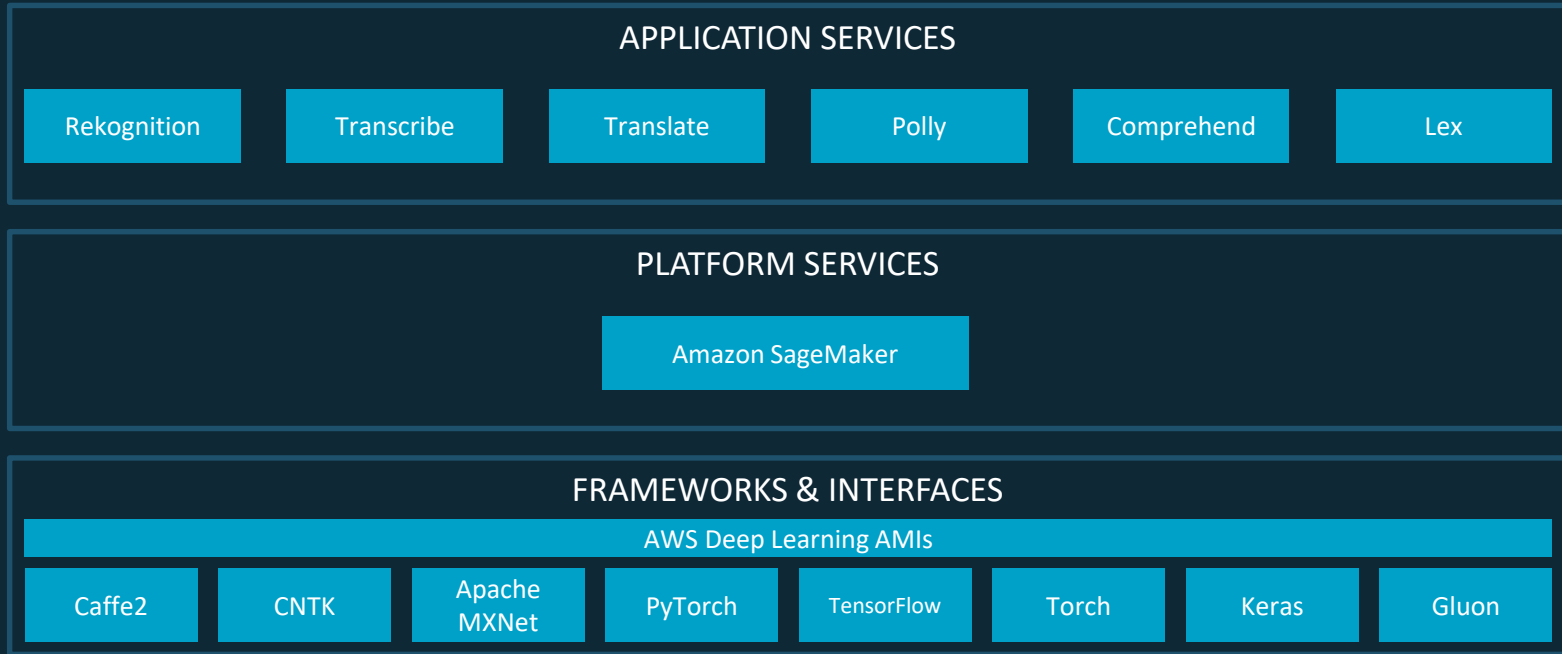

Niranjan Hira – AWS Solutions Architect

April-2018

# What's this about?

- About the Services
- Typical Usage
- Workflows
  - Generating video subtitles

# The Amazon machine learning stack

# Unprecedented rate of audio & video data generation

## Audio

- Contact centers
- Meetings

## Video

- Broadcast TV
- On-demand video
- Social media

# Amazon Transcribe

A fully managed and continuously trained automatic speech recognition (ASR) service that generates accurate transcripts for audio and video files

# Amazon Transcribe

Customer insights

Greater access

Global reach

Targeted  
advertising

Search archives

# Amazon Transcribe

## Automatic speech recognition

Multiple  
languages

Intelligent punctuation  
and formatting

Timestamp  
generation

Support for  
telephony audio

Recognize multiple  
speakers

Custom  
vocabulary

# Amazon Transcribe – Console walk-through

Amazon Transcribe > Create transcription job

## Create transcription job

**Input** [Info](#)

**Name**  
  
The name can be up to 200 characters long. Valid characters are a-z, A-Z, 0-9 and - (hyphen).

**S3 input URL**  
Type or paste the URL of your input audio file in S3.  
  
Valid formats for audio files are mp3, mp4, wav, and flac.

**Language**  
Choose the language of the input audio.

**Format**  
Choose the format of your audio file.  
  
Valid formats for the audio are mp3, mp4, wav and flac.

**Audio sampling rate (Hz) - optional**  
Type the sampling rate of the input audio file.  
  
Must be an integer between 8000 and 48000

**Apply custom vocabulary - optional** [Info](#)  
A custom vocabulary improves the accuracy of recognizing words, phrases, and commands.

# Amazon Transcribe – Command line

```
aws transcribe start-transcription-job --cli-input-json '  
{  
  "TranscriptionJobName": "demo-job-97",  
  "LanguageCode": "en-US",  
  "MediaFormat": "mp4",  
  "Media": {  
    "MediaFileUri": "s3://mast-mast-3/mypath/myfile.mp4"  
  }  
}'
```

# Amazon Translate

Amazon Translate delivers fast, high-quality, and affordable language translation

*Currently supported: English to Arabic, Chinese (Simplified), French, German, Portuguese, and Spanish*

*Coming soon: Japanese, Russian, Italian, Traditional Chinese, Turkish, and Czech*

# Amazon Translate

Natural and fluent language translation (based on neural networks)

Real-time translation

Batch analysis

Automatic language  
recognition

Low cost

# Use for High-Volume and Time-Sensitive Content

## Machine translation

- User-authored content (reviews, forums, etc.)
- Interpersonal communications (e.g., gaming chat, customer service)
- Insight extraction (e.g., sentiment, document classification)
- Content discovery
- Subtitles / live captioning

## Post-edited machine translation

- UI
- Marketing materials
- Regulatory filings
- Product documentation

*Share of worldwide digital content*

# Amazon Translate – Console walk-through

The screenshot shows the Amazon Translate console interface. At the top, the AWS logo is on the left, and navigation links for 'Services', 'Resource Groups', and user information are on the right. The main content area is titled 'Try Amazon Translate' and features a 'Translate text' section. In this section, the source language is set to Spanish (es) and the target language is English (en). The source text is 'La crisis venezolana y el ataque a Siria, los temas que dominaron la Cumbre de las Américas', and the translated text is 'The Venezuelan crisis and the attack on Syria, the themes that dominated the Summit of the Americas'. Below the text, it indicates '91 characters, 92 of 5000 bytes used' and provides a feedback link. A 'JSON samples' section is also visible, with a 'View API documentation' link and a 'Translation' section showing a JSON request snippet.

datos

# Beyond subtitles

- Automatically translate survey input text files as they are added to Amazon S3
- For status updates to a database, add a translated-status attribute

# Now what?

- Use Amazon Transcribe and Amazon Translate for media and big data workflows
  - Consider services like AWS Glue, Amazon CloudWatch Events, and AWS Lambda for scalability
- Watch for new patterns on the AWS ML Blog
  - <https://aws.amazon.com/blogs/machine-learning/>
- Tell us how we can improve these new services

# Thank you!
