About Weaveworks

Team

- Alexis Richardson, CEO
- Cornelia Davis, CTO
- Steve George, COO
- Global Presence:
 - US East, Central, West
 - Europe
 - India, Japan

Thought Leadership

- Founding chair of the CNCF technical oversight committee (TOC)
- Coined the term GitOps, and created the open source tools that make it work
- **Creator of eksctl**, the most used way to work with AWS EKS
- Invented open source solutions to run Kubernetes at scale for our own Weave Cloud SaaS product

Notable Facts

- Founded in 2014
- **Investors include:** Accel, **AWS**, Deutsche Telekom, Ericsson, Google Ventures, Orange and Redline
- **Top 10 contributor to the CNCF**
- Multiple - thousand plus star open source projects

Weaveworks is a Leader in Open Source & Cloud Native

Kubernetes

We led the creation of the flagship Kubernetes installer Kubeadm

We created EKSctl – the [official EKS CLI](#) enabling GitOps on AWS

Weave Net - the original container SDN & Firewall

LibCNI Kubernetes network model - work with CoreOS (now RH/IBM)

[Weave Ignite](#) - the container VM for secure, fast Kubernetes anywhere

Observability

We made Prometheus scalable with Weave Cortex & launched 1st Prom-aas, powering EA's global games. Cortex is now a CNCF project.

Weave Scope is one of the ["top tools for monitoring Kubernetes"](#) providing management and monitoring and visualization for <20,000 users

CD and GitOps tooling

CNCF Flux is a Kubernetes-native CD tool for GitOps - also Flux-Helm.

Weave Flagger for progressive delivery

JKcfg for templating, policy and actions

Kubediff - diff alerting for Kubernetes to enable GitOps

Kured - Cluster Reboot Tool

Grafanalib - GitOps dashboarding for Grafana

Integrations

Weaveworks for: Istio, Kubeflow, OpenFaaS, Cloud Foundry

Selected Customers

Other Industries

The Kubernetes Big Bang

Platform Operators

Cluster Sprawl

Day-2 Operations Overhead

Redundant Services

Cluster Inconsistency

Inefficient utilization

Application Developers

Infrastructure Concerns

Redundant efforts across teams

Reliability and Availability

The Shared Services Platform

Cluster Sprawl
Redundant Services
Cluster Inconsistency
Inefficient utilization
Day-2 Operations Overhead

SSP abstracts the complexities of cloud-native Kubernetes infrastructure from developers. Workloads are consolidated into large scale, production-ready clusters. Platform operators centrally apply security and monitoring best practices, and services are centrally managed and offered to all teams.

**What about
Developer Teams?**

SSP provides self-service and autonomy for teams, while maintaining workload segregation and reducing operations and infrastructure efforts from dev teams.

**KEEP
CALM
WE
HAVE THE
SOLUTION**

Step 1
**Switch to managed
K8s and consolidate**

Amazon **EKS**

Integration

Amazon **EKS**

Amazon **EKS**

Development

K8s is quite complex if you look under the hood

Networking
Storage
Worker Scaling
Worker Recovery
Control Plane High Availability
Upgrades and Patches
Security and Authentication

Managed K8s abstracts all that away

Amazon Elastic Kubernetes
Service (Amazon EKS)

BOARDING PASS		AIRLINES NAME	AIRLINES NAME
JFK from New York	→ CDG to Paris	KH15 Flight Number	B Terminal
JOHN SMITH Passenger name JANUARY 25, 2018 Date	05:20 PM Boarding Time	C22 Gate	from New York/JFK 05:50 PM to Paris/CDG 07:20 AM
BUSINESS Class	20A Seat		20A Seat

Step 2 Operate using GitOps

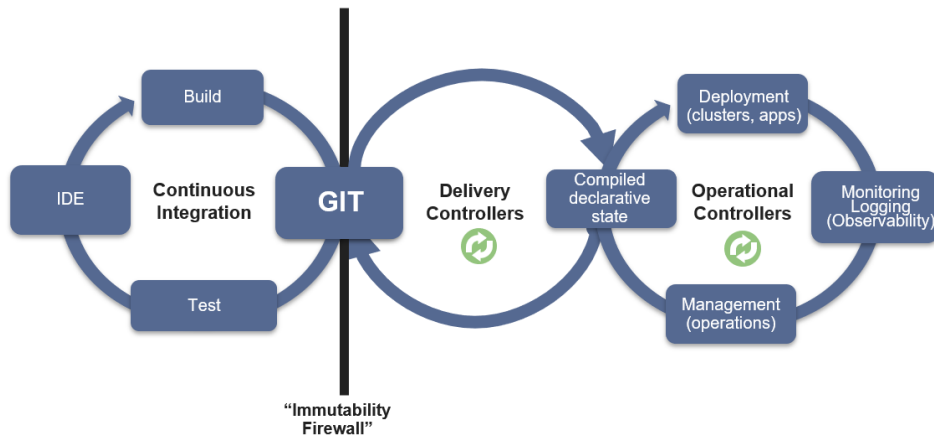

How do operate our SSP?

GitOps! An Operating Model for Cloud Native

Principles

1. Desired state of the full system is **declared** in code
2. Desired state is **versioned**, versions are **immutable**
3. **Agents reconcile** the running state with the desired state
4. Reconciliation happens **continuously**

```

Full codebase at: <https://github.com/weaveworks-gitops-demo/team-ssp>

Success

**Let's look at the
benefits**

Benefits

Kubernetes without the
management complexity

Secured, compliant
developer autonomy

Multi-stage deployment off
the shelf

DRY Reproducibility

Faster recovery (< MTTR)

Common Tooling and
Lifecycle

Auditability and Traceability

Thank you!

Contact us to discuss how to get your customers operating
EKS at scale quickly!
