@bealhelen 

About DevOps Institute

DevOps Institute's mission is to advance the human elements of DevOps by creating a safe and interactive environment where our members can network, gain knowledge, grow their careers, support enterprise transformation and celebrate professional achievements.

We connect and enable the global DevOps community to drive change in the digital age.

Become a professional member at
www.devopsinstitute.com

MISSION: Bringing Joy to Work

Helen Beal

Herder of Humans

 @bealhelen

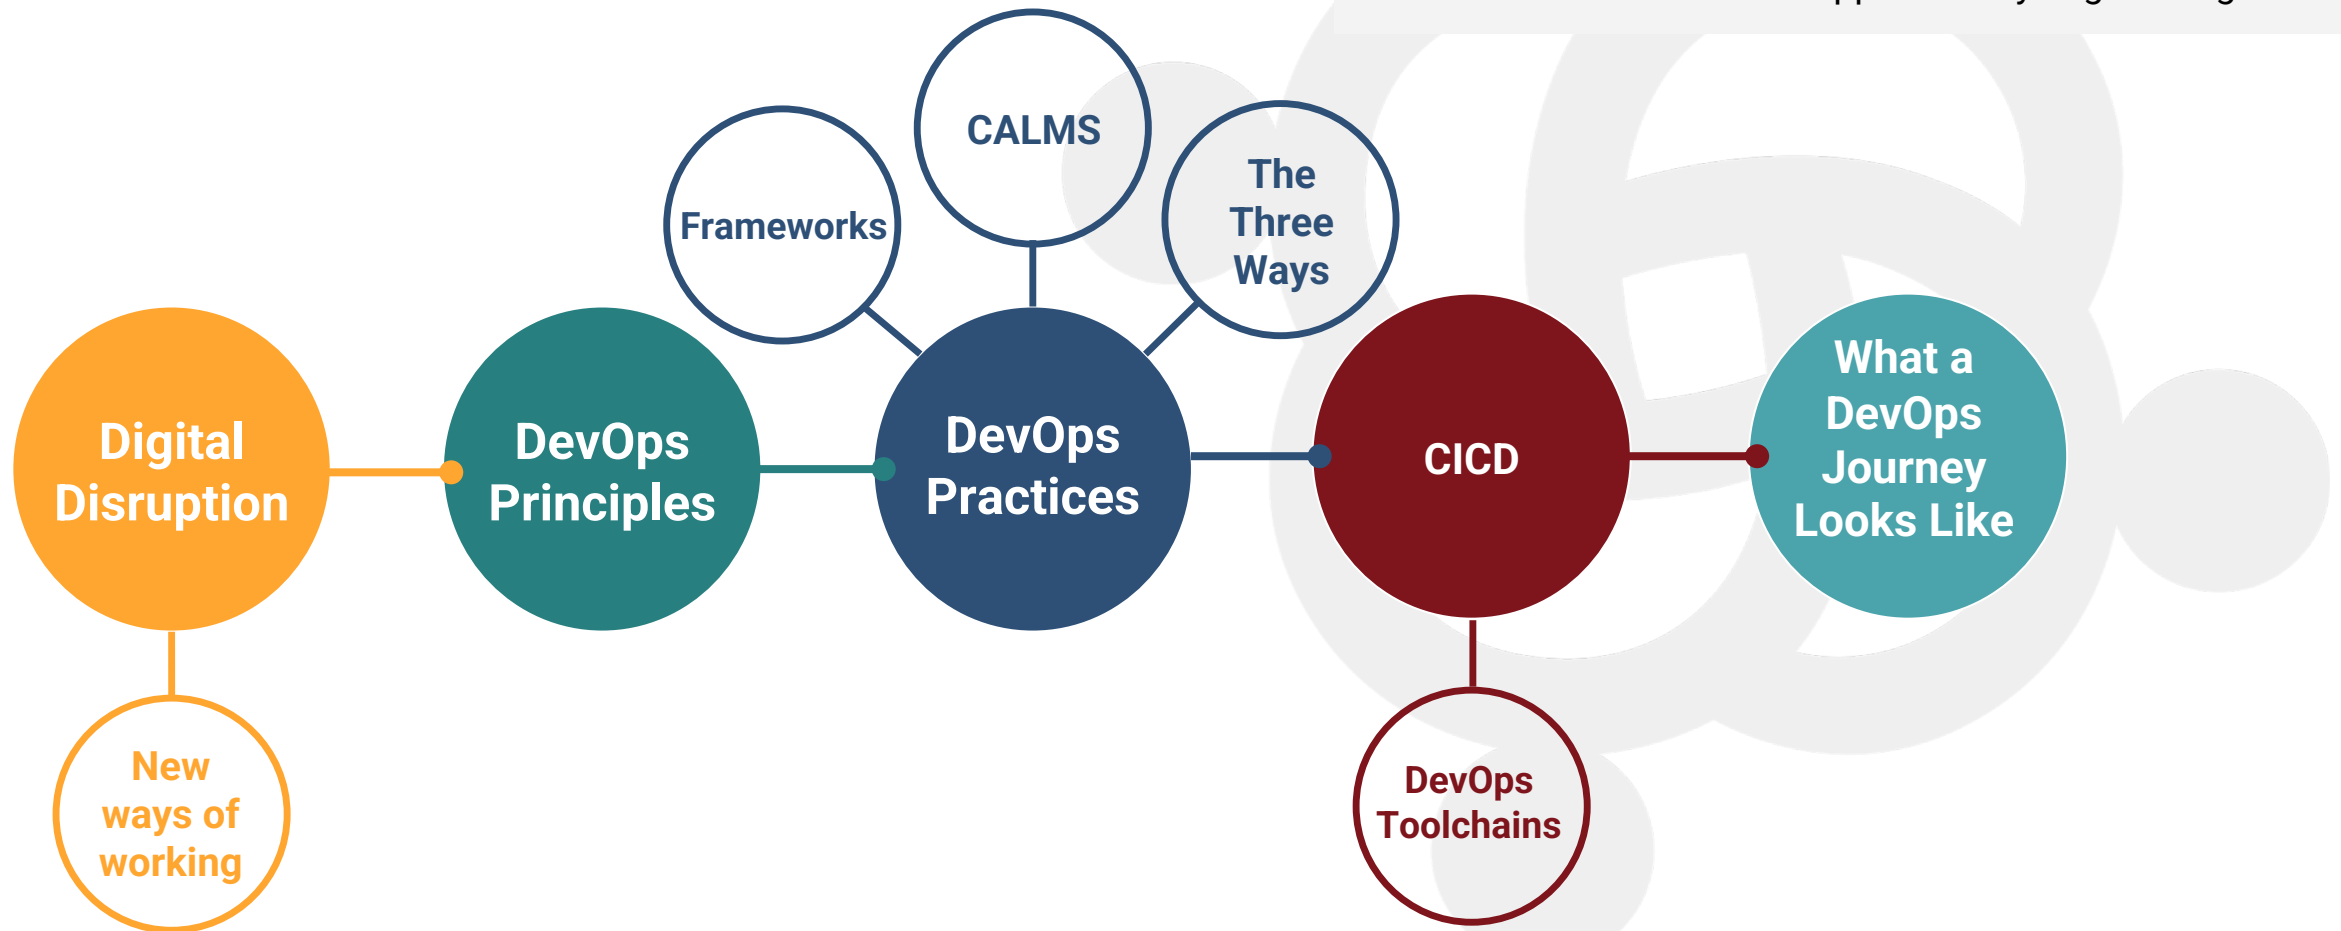

Helen Beal is a DevOps and Ways of Working coach, Chief Ambassador at DevOps Institute and an ambassador for the Continuous Delivery Foundation. She is the Chair of the Value Stream Management Consortium and provides strategic advisory services to DevOps industry leaders such as Plutora and Moogsoft. She is also an analyst at Accelerated Strategies Group. She hosts the Day-to-Day DevOps webinar series for BrightTalk, speaks regularly on DevOps topics, is a DevOps editor for InfoQ and also writes for a number of other online platforms. She regularly appears in TechBeacon's DevOps Top100 lists and was recognized as the Top DevOps Evangelist 2020 in the DevOps Dozen awards.

Flow: Talk Map

You will learn:

- How DevOps influences organizational, team and system design in cloud
- Why value stream centric thinking is essential to achieve continuous compliance
- How CICD and DevOps toolchains accelerate value outcomes and support safety engineering

Digital Disruption

The 5th Technology Revolution

- Enterprises have young, nimble start-up competitors
- Agile software development and cloud infrastructure is increasing
- IT can no longer operate in a silo culture
- More organizations are migrating to the cloud
- Consumers have “app” mentalities and expectations
- There is more data available to the business
- Time to value must accelerate

To meet these changing conditions, IT must adapt its culture, practices and automation to be more ‘continuous’.

1

The industrial revolution

AI, big data, robotics, IoT, blockchain and crypto

5

Connection of frontier tech to purpose and inclusivity

New Ways of Working

Better, sooner, faster, safer, happier

Dimension	Traditional IT	DevOps
Batch size	Large & Monolithic	Micro & Loosely Coupled
Organization	Skill Centric Silos	Autonomous squads
Scheduling	Centralized	Decentralized & Continuous
Release	High Risk Event	"Like Breathing"
Information	Disseminated	Actionable
Culture	Do Not Fail	Fail Early
Metric	Cost & Capacity	Flow
'Definition of Done'	"I did my job."	"The customer has received value"

Adapted from an original article by Mustafa Kapadia

Check-in with James

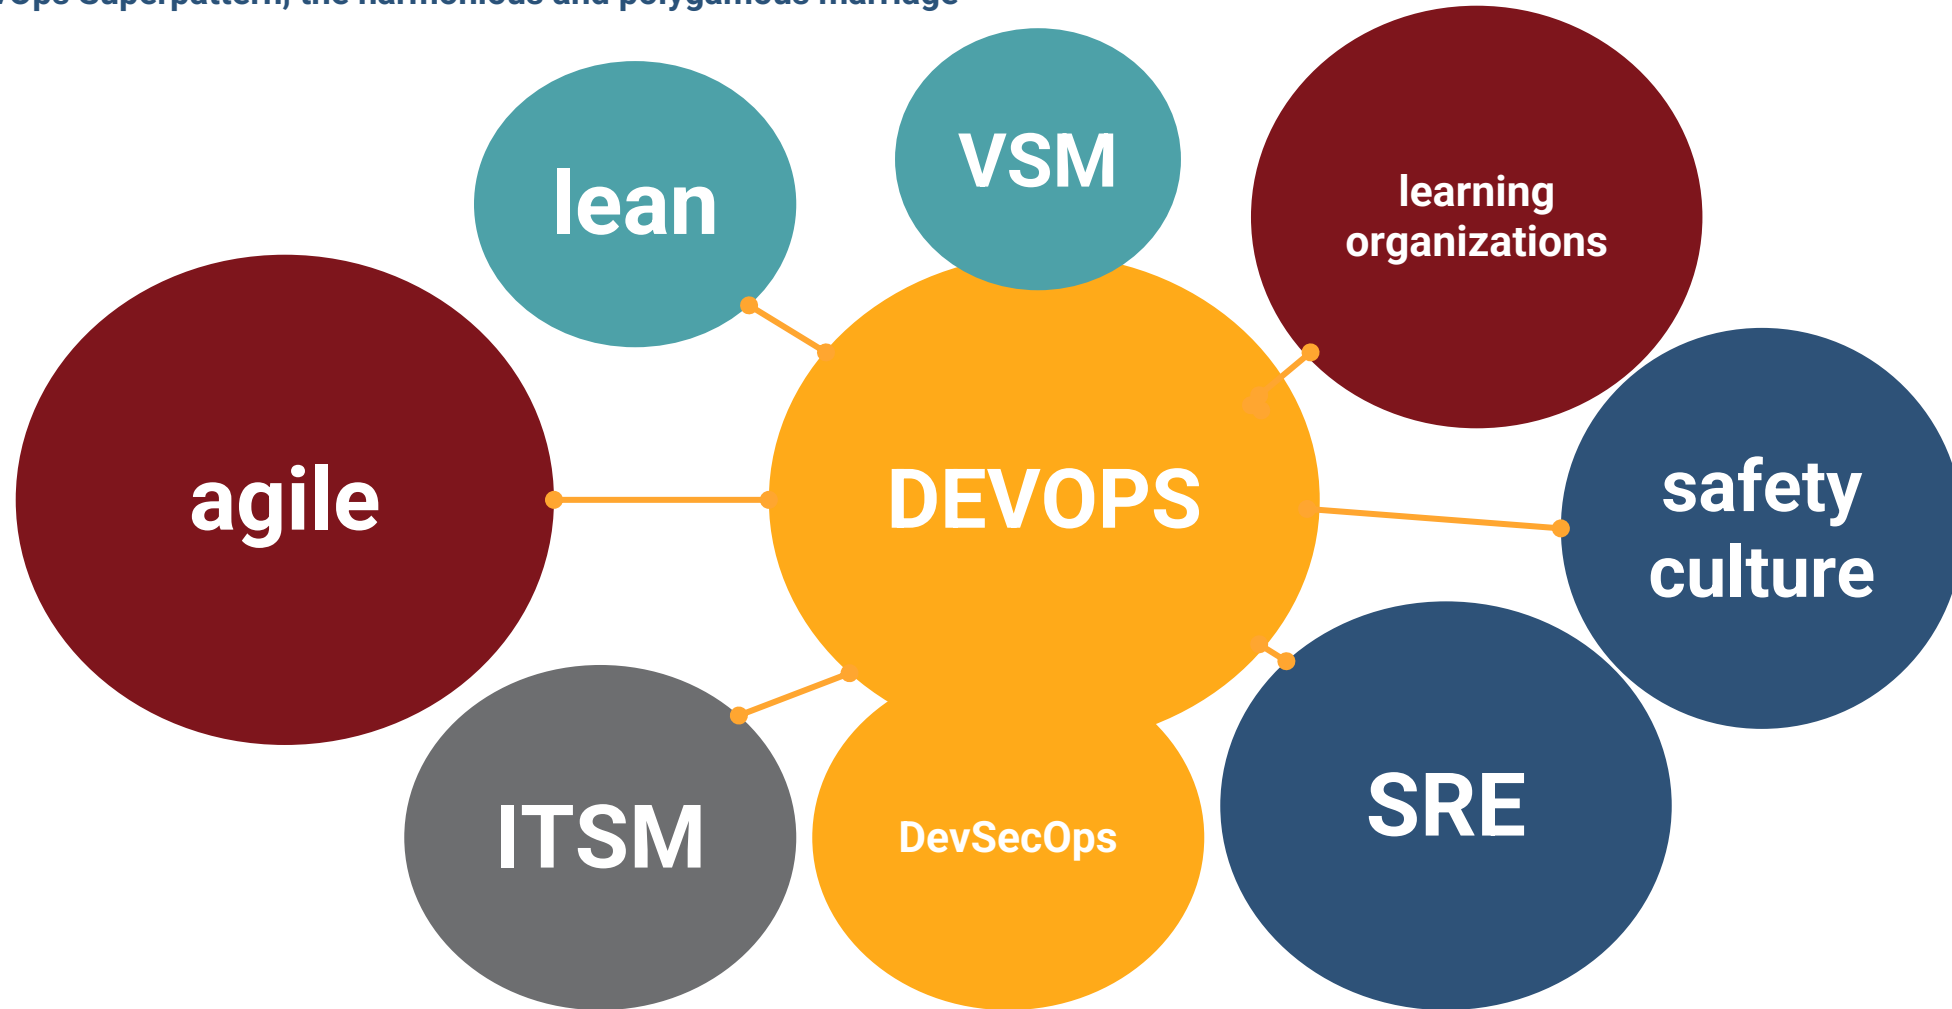

**How does cloud help us
with these transitions?**

Frameworks

The DevOps Superpattern, the harmonious and polygamous marriage

Check-in with James

Where were you when you discovered DevOps?

An elevator acronym to describe DevOps

C	CULTURE
A	AUTOMATION
L	LEAN
M	MEASUREMENT
S	SHARING

John Willis

Damon Edwards

Jez Humble

Culture	Automation	Lean	Measurement	Sharing
Organizational purpose has clarity	Goal is to be high performing IT and organization	Focus is on the customer	High level goals linked to PBIs	Transparency and clarity throughout the organization
Authority is distributed, teams have autonomy	Loosely coupled systems	Value stream centric thinking	Teams measure themselves	Teams reward each other for collaboration
Failure is a learning opportunity	'Shift left', fast feedback	Focus is on removing waste	Data driven decision making	Stories are shared - good AND bad
Leaders are transformational	Observability leads to discovery leads to improvement	Work is visible	Measurements used to drive experiments to inspect and adapt	Leaders do not punish failure but globalize local learnings

Transformational Leadership

Distributing authority, breaking down silos: “We build it, we own it”

Dimensions of transformational leadership

"The goal of leadership is not to command, control, berate, intimidate, and evaluate workers through some set of contrived metrics. Instead, the job of leaders is to help organizations become better at self-diagnosis, self-improvement, and to make sure that local discoveries can be translated and converted to global improvements."

**Dr Stephen Spear cited by Gene Kim
in Beyond the Phoenix Project**

The characteristics of transformational leadership are highly correlated with IT performance and employee Net Promoter Score (eNPS).

From The State of DevOps Report 2017

Check-in with James

**“You build it, you run it”
originated with Werner
Vogels. Let’s talk about it!**

The Three Ways

Key principles of DevOps as featured in The Phoenix Project

The First Way	The Second Way	The Third Way
Flow	Feedback	Continuous Experimentation & Learning
Understand and increase the flow of work (left to right)	Create short feedback loops that enable continuous improvement (right to left)	Create a culture that fosters: <ul style="list-style-type: none">• Experimentation, taking risks and learning from failure• Understanding that repetition and practice is the prerequisite to mastery

The Five Ideals

As featured in The Unicorn Project

The First Ideal

Locality and Simplicity

The Second Ideal

Focus, Flow, and Joy

The Third Ideal

Improvement of Daily Work

The Fourth Ideal

Psychological Safety

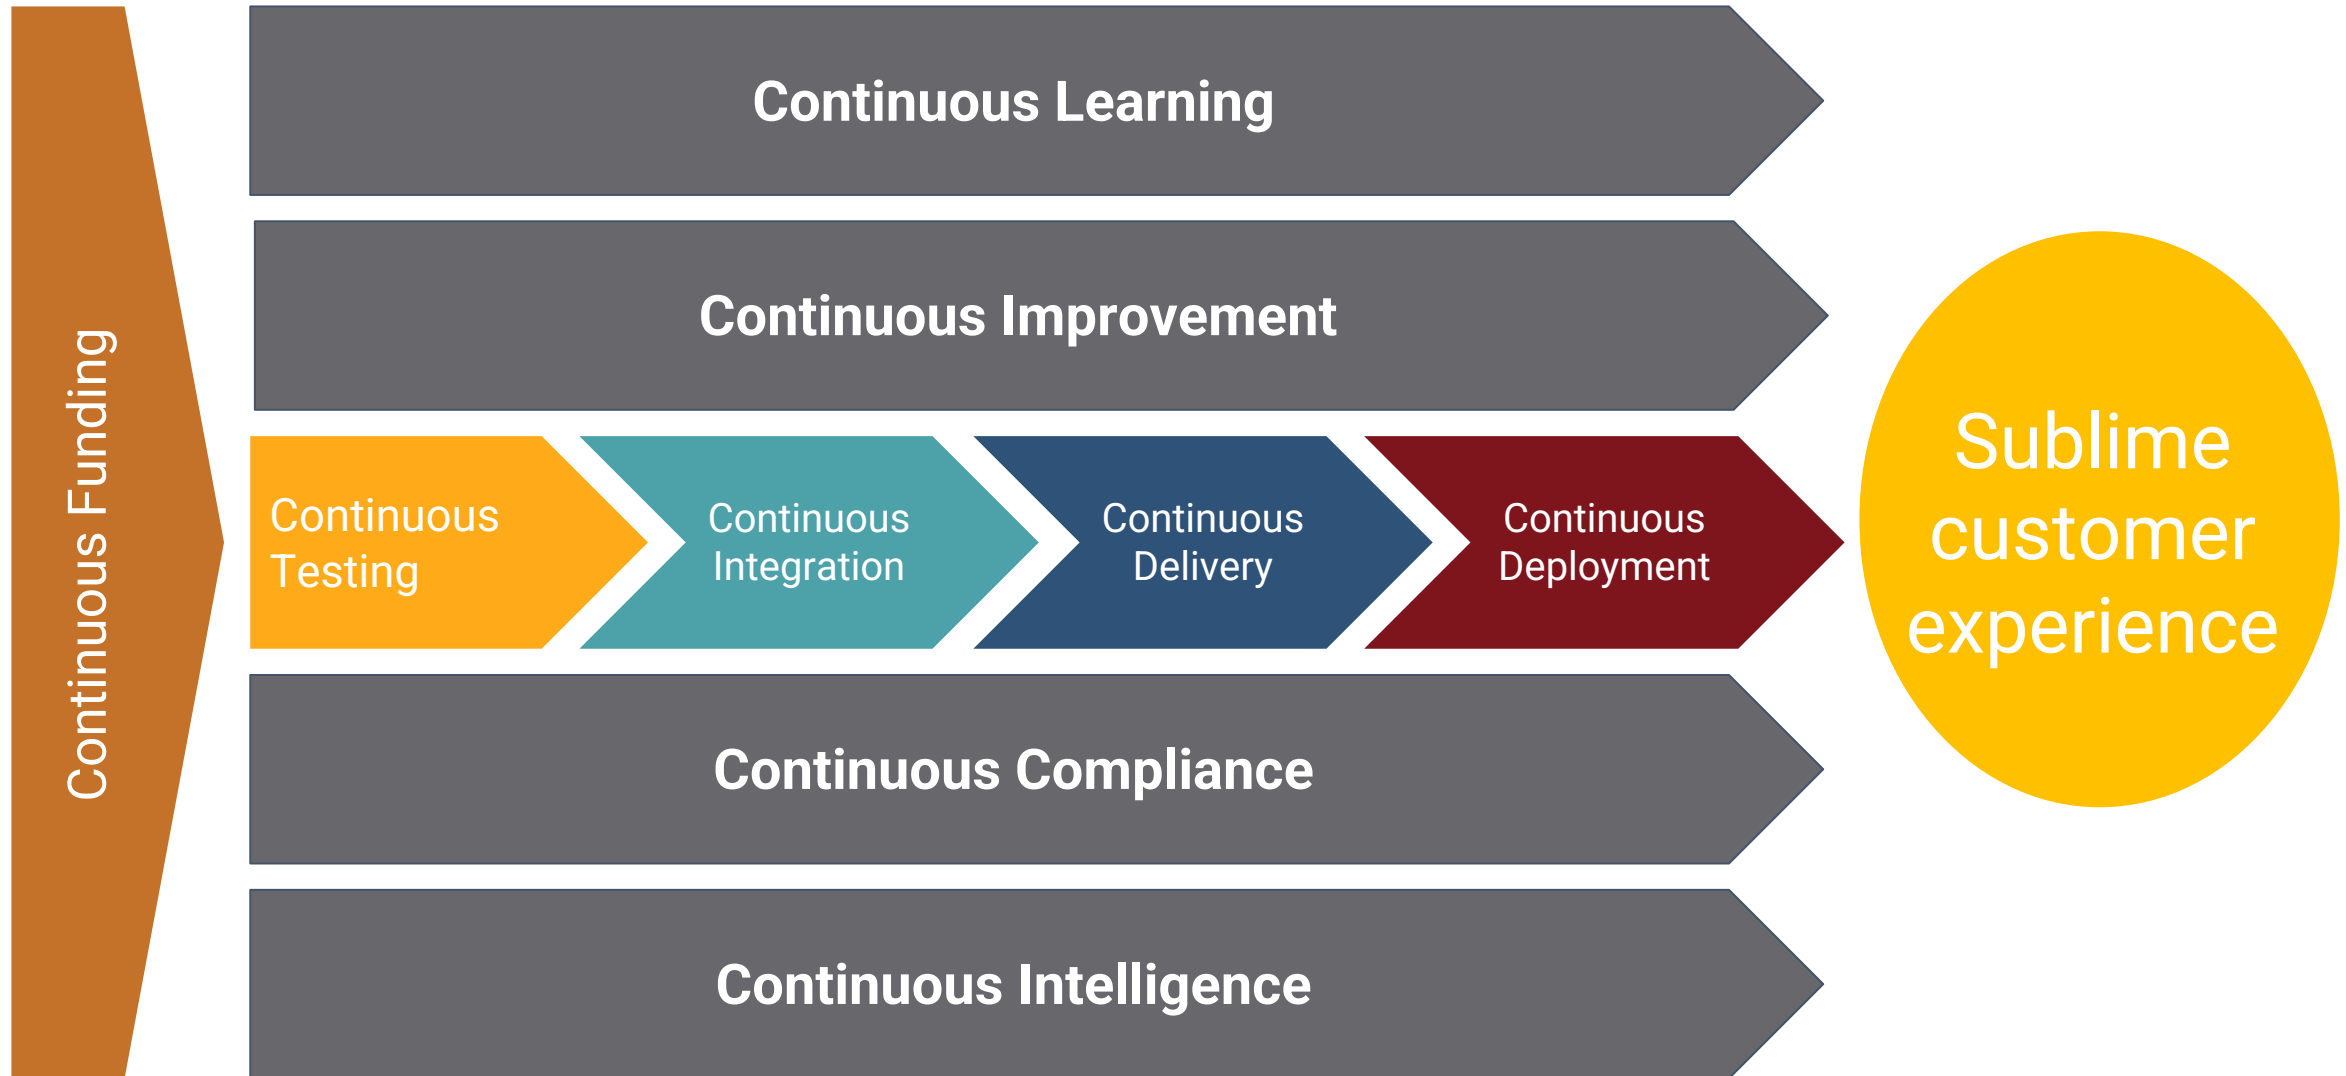

The Fifth Ideal

Customer Focus

DevOps Practices

All the continuoses

"In short, CI/CD toolchains help with velocity and quality of code, allow for better collaboration among the teams and automates many steps, tasks and processes which reduced the risk and cost of software development."

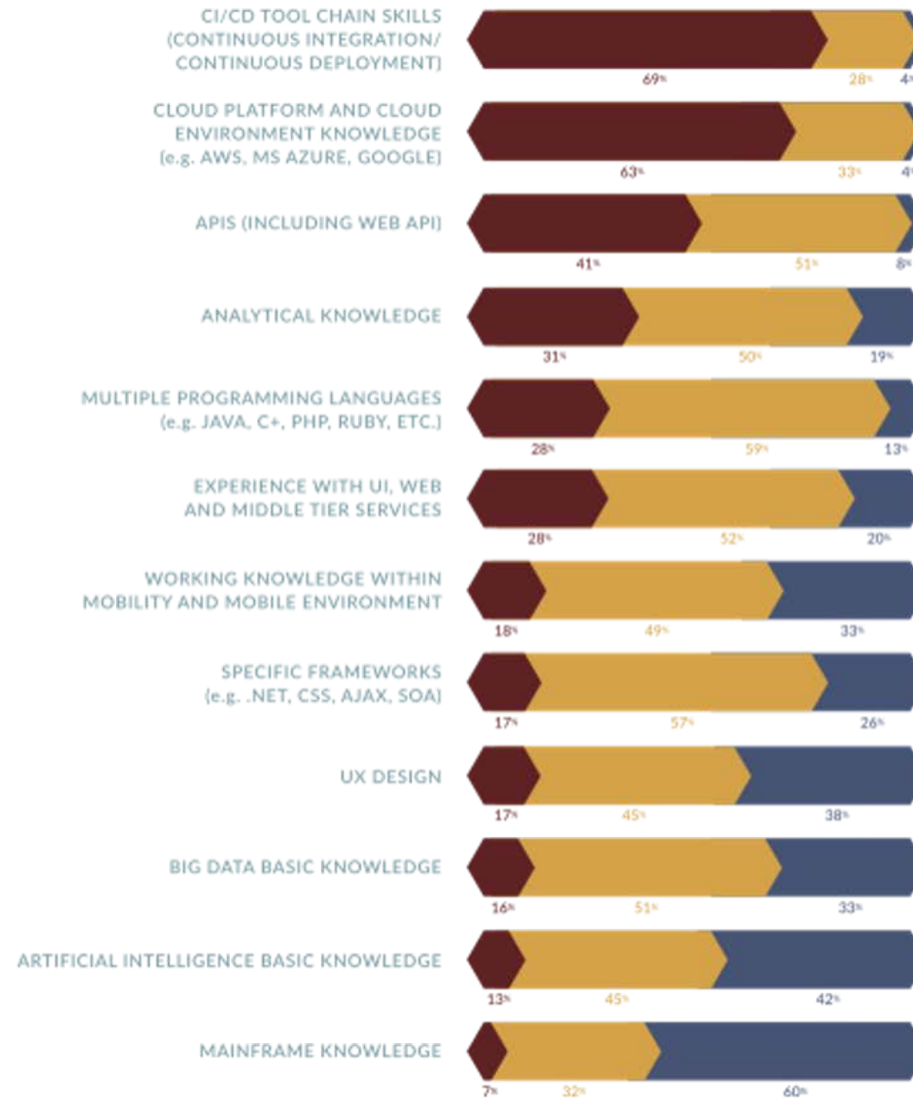

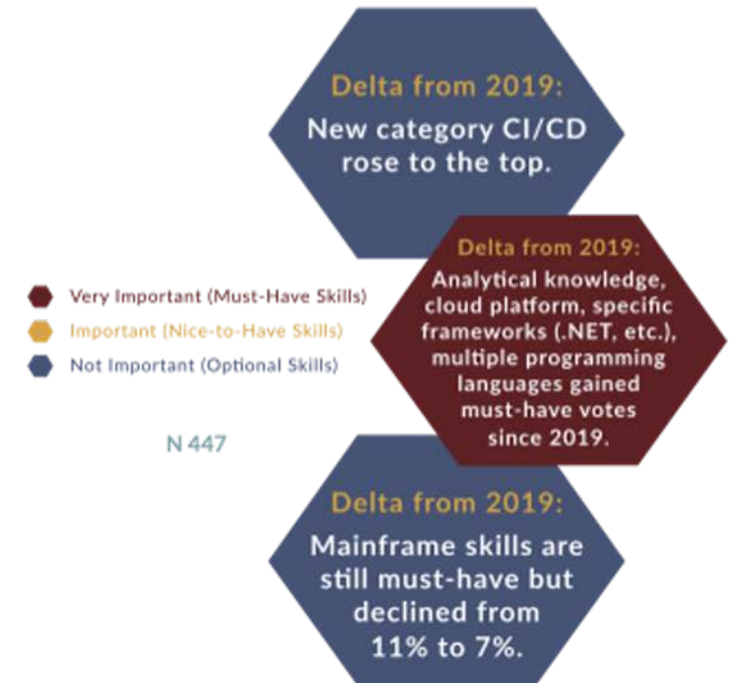

Figure 13: Technical Skills For The DevOps Human CI/CD Toolchain, Cloud Platform And Understanding APIs Are The Top 3 Must-have Technical Skills

Q How would you rate the importance of the following technical skills for your DevOps team members?

Continuous Integration

You can do this in waterfall too... if you want to

- All developers check code in at least daily to trunk
 - Trunk based development
- Each check-in is validated by
 - An automated build
 - Automated unit, integration and acceptance tests
- Is dependent on consistent coding standards
- Requires version control repositories and CI servers to collect, build and test committed code together
- Runs on production-like environments
- Allows for early detection and quick remediation of errors from code changes before moving to production

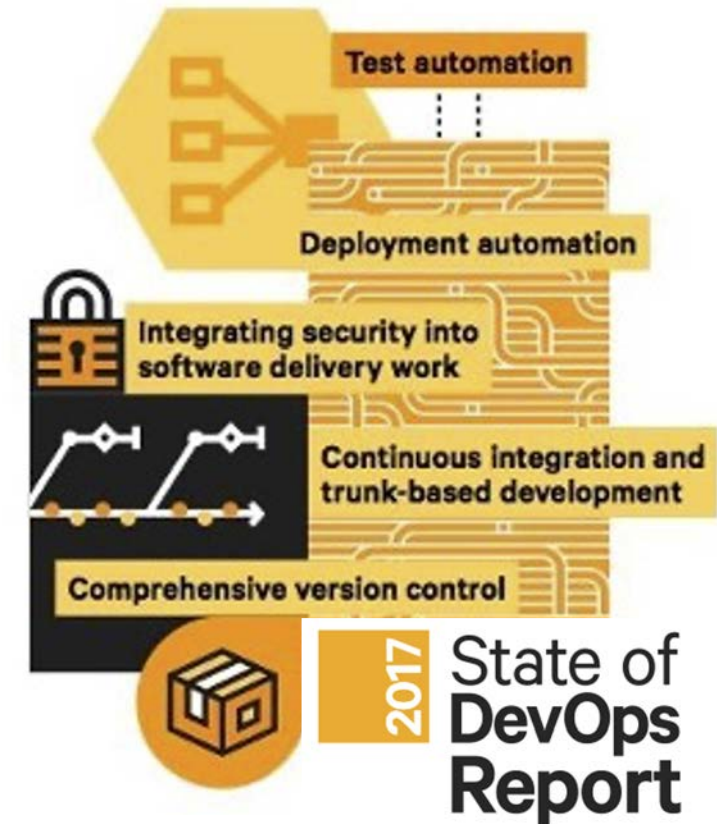

Avoid
'merge
hell'

Continuous Delivery

Software is always in a releasable state - ready to go, at the push of a button

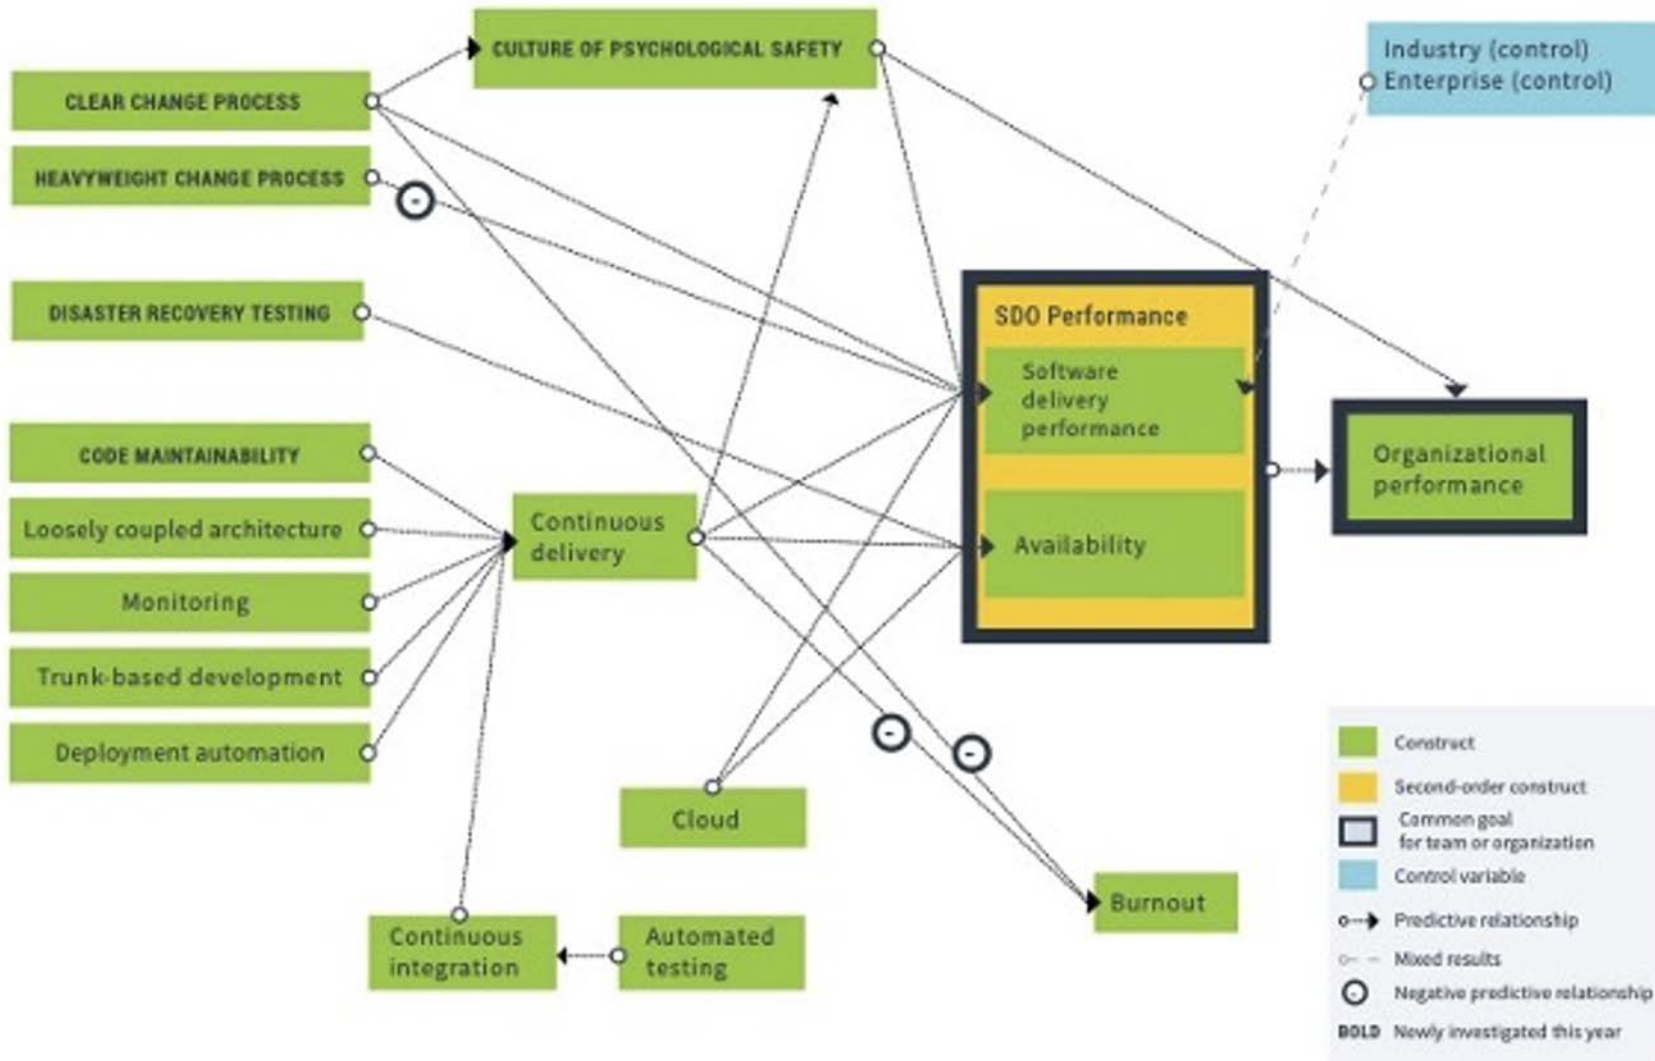

- Takes continuous integration to the next level
- Provides fast, automated feedback on a system's production-readiness
- Prioritizes keeping software releasable/deployable over working on new features
- Relies on a deployment pipeline that enables push-button deployments on demand
- Reduces the cost, time, and risk of delivering incremental changes

Factors that positively contribute to continuous delivery:

Continuous Delivery

Leads to higher organizational performance

Continuous Deployment

Continuous Delivery

Continuous Deployment

 Manual trigger

 Automatic trigger

**How does the DevOps
toolchain look
different in cloud?**

What a DevOps Journey Looks Like

J-Curve of Transformation - 2018 State of DevOps Report

Key Takeaways

DevOps = Better, faster, safer, sooner, happier

Continuousness

- Continuous testing
- Continuous integration
- Continuous delivery
- Continuous deployment
- Continuous improvement
- Continuous compliance
- Continuous intelligence
- Continuous funding...

CALMS

- Culture
- Automation
- Lean
- Measurement
- Sharing

DevOps + Cloud

- Cloud tech correlates to DevOps and organizational performance
- Cloud solves common DevOps problems:
 - Production-like test environments
 - Loosely coupled services
 - Integrated toolchains

Dr. James Bland

Global Tech Lead - DevOps at AWS

Jamesbland123 

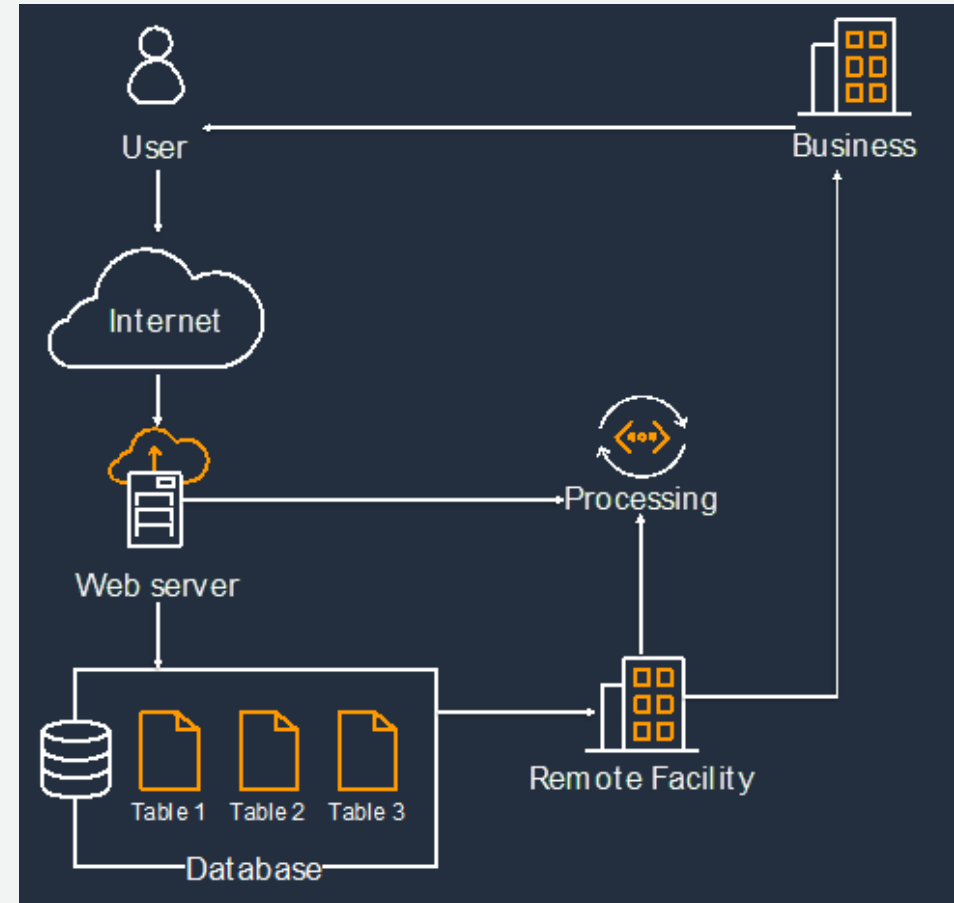

Amazon's journey

Just starting out

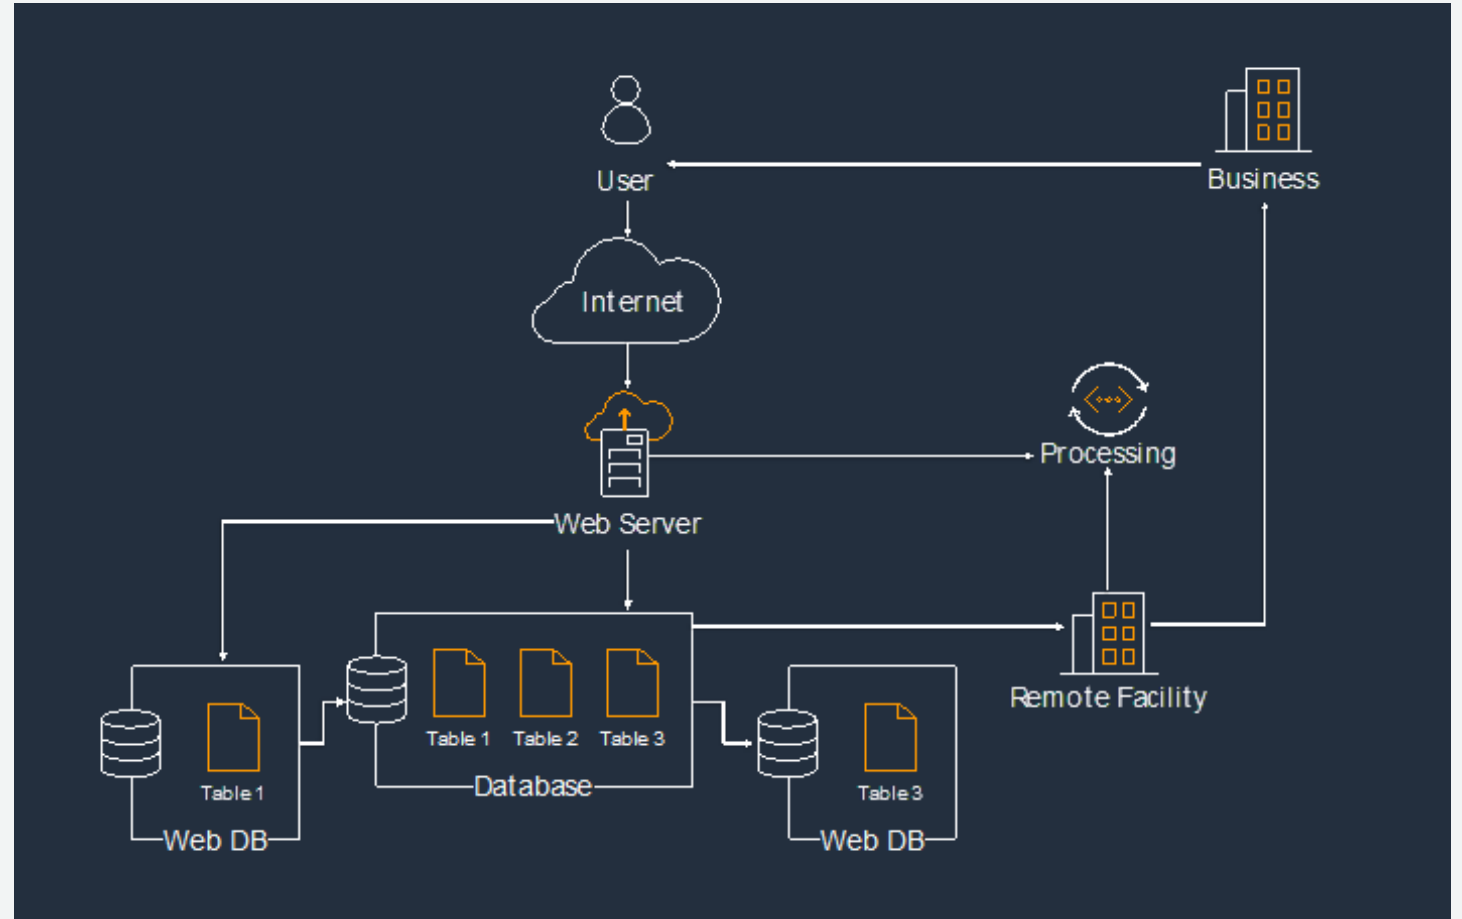

This is how many web architectures started out, and it is how Amazon started too...

There are many bottlenecks, and scaling of the web server was an immediate factor

Scaling v1

This was a bit better,
still not very scalable

Challenges

- Dependencies on other teams
- Communication
- Speed of innovation
- Deployment risk

Our mission

Our task was to improve:

- Innovation
- Speed
- Agility
- Safety
- Team Dynamics

What we did:

- Decomposed for agility
- Cultural and operational shift
- Created tools for software delivery

Going further

Principles

- Make units as small as possible (Primitives)
- De-couple based on scaling factors, not functions
- Each service operates independently
“Communication is terrible!” — Jeff Bezos
- APIs (contracts) between services

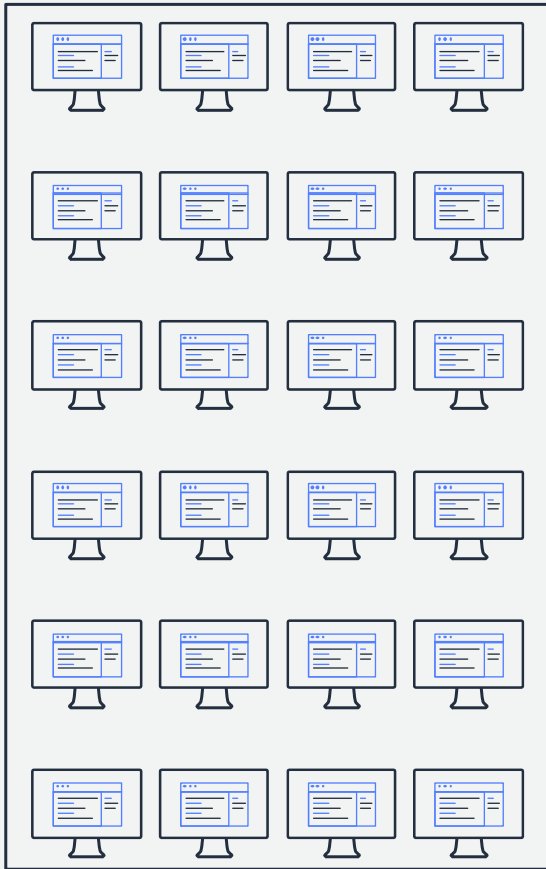

Impact to our development

Monolith development lifecycle

Developers

Services

Delivery pipelines

Monolith development lifecycle

Developers

Services

Delivery pipelines

Monolith development lifecycle

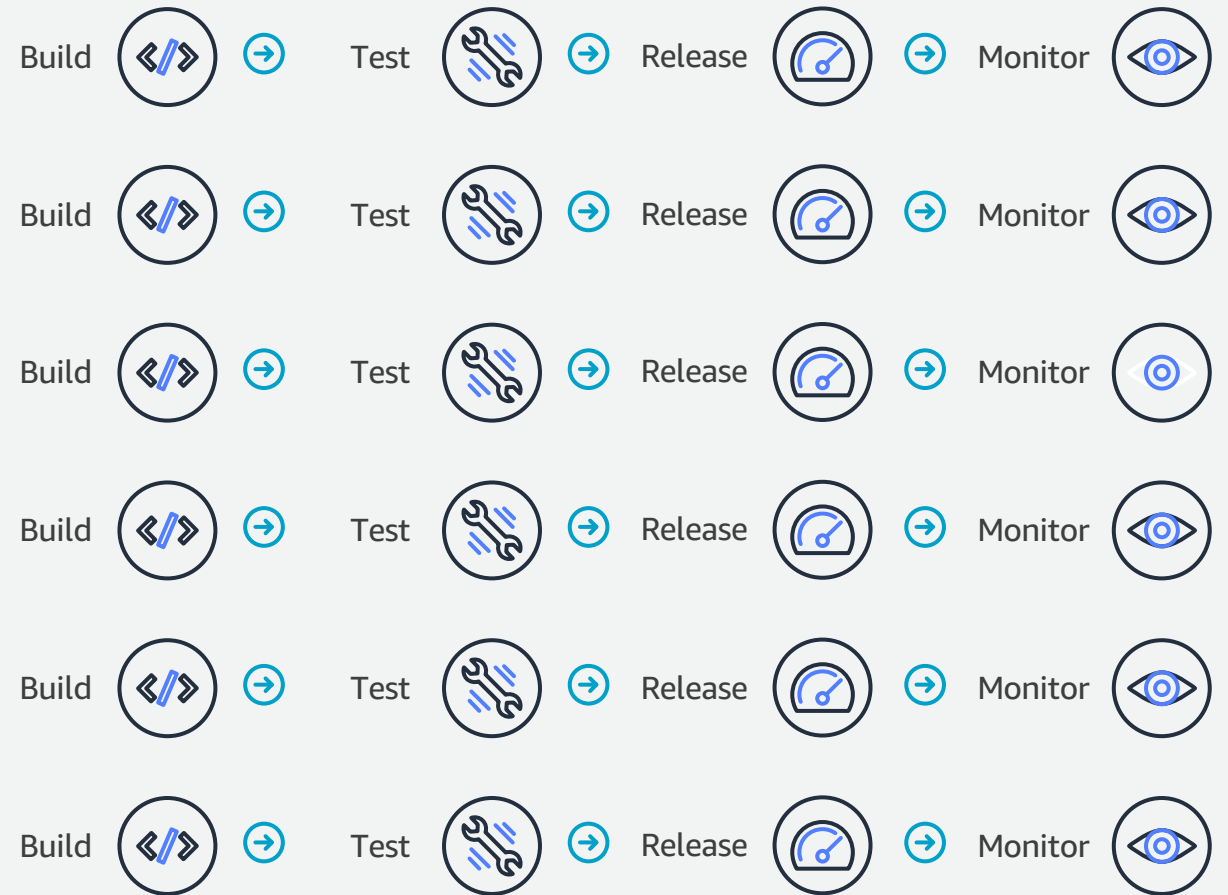

This led to changes in organization

Developers

Services

Impact to our organization

Getting (re)organized

“Two-pizza” teams

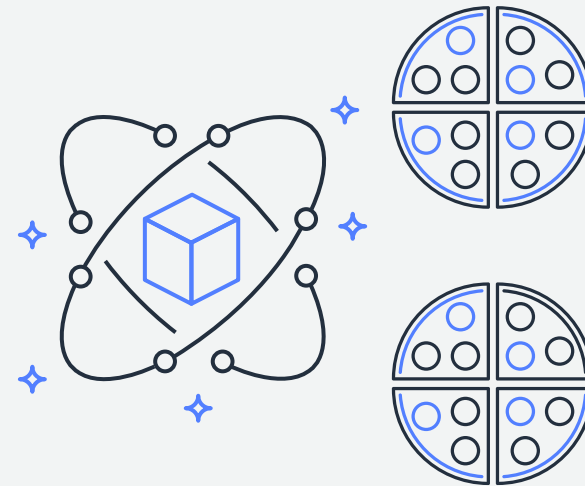

- Own a service
- Minimizes social constraints (Conway’s law)
- Autonomy to make decisions

Transformation timeline

2001 → 2002

Monolithic
application + teams

Microservices
+ 2-pizza teams

Teams own everything

- Planning
- Security
- Performance
- Scalability
- Deployment
- Operation
- Bugs
- Documentation
- Testing...

“ You **build** it, you **run** it.

- Werner Vogels (CTO, Amazon)

1. Building Blocks

2. Guardrails

What are guardrails?

Guardrails are mechanisms, such as processes or practices, that reduce both the occurrence & blast radius of undesirable application behavior

What are some real-world guardrails?

Monitoring

CPU Utilization
Database throughput
Business processes

Provisioning

Access permissions
Resource availability
Configuration

Deployment

Time window
Toolsets available
Size or timing of test releases

Cost management

Resource costs
Resource utilization
Spend run rates

Security & compliance

Account set up/access
Standards compliance
Certificate maintenance

3. Fully Automated Deployments

- Check-in source code such as .java files and Dockerfile
- Peer review new code

- Compile code
- Unit tests
- Style checkers
- Create container images

- Integration tests with other systems
- Load testing
- UI tests
- Security testing

- Deploy to production environments
- Monitor code in production in order to quickly detect errors

Now we have...

Modern applications

Today we have modern applications

- Use independently scalable microservices (serverless, containers...)
- Connect through APIs
- Deliver updates continuously
- Adapt quickly to change
- Scale globally
- Are fault tolerant
- Carefully manage state and persistence
- Have security built-in

Deployment at scale

Just the beginning

Along the way we have learned a lot about writing software

That's performant, safe, and scalable

We have had to solve some really hard problems

At massive scale

We know our way is not the only way, and many of our solutions are not fancy

But we know they work

We are long obsessed with building things to help our customers

We want to share the benefits of what we learned along the way

AWS Marketplace DevOps Workshop Series participating partner hands-on labs

And more coming soon!

Next steps

-  Bookmark the Workshop Series landing page, check back for new content or subscribe to email updates
-  Move on to Module 2: CI/CD Pipelines and get hands-on with labs
-  Visit the AWS Marketplace website to experiment with DevOps tooling

Move on to Module 2: CI/CD Pipelines

Choose a module to get started

In each module you will join an instructor-led presentation from AWS and an ambassador of the DevOps Institute. Following the presentation you'll be able to choose a hands-on lab to complete from a selection of the best tools in DevOps. **Pick a module to get started** and **subscribe to email updates** to learn when new content is available.

Module 1

Practicing DevOps

In this first presentation you'll get an overview of the workshop series and receive practical instruction on how to build the right foundation for a successful DevOps practice in AWS.

Presentation:
May 18, 2021

[Register now >](#)

Module 2

CI/CD Pipelines

In this module you'll learn how to implement a well-engineered CI/CD pipeline that considers governance and provides traceability from idea to production.

Presentation:
May 26, 2021

[Register now >](#)

Hands-on labs:

of the pipeline is critical to ensure quality for end users. In this session we'll dig into best practices for developers and architects, covering functional, integration, unit testing and more.

Presentation:
Aug 26, 2021

[Get updates >](#)

Module 3

Evolving to Continuous Deployment

Deploying code changes live into production is still a terrifying prospect for many organizations. We'll dive deep into how using the right processes and tools can make this safe and advantageous.

Presentation:
June 24, 2021

[Get updates >](#)

Module 4

Infrastructure as Code

Here you'll get the in and outs of how to really automate the Ops in DevOps. Craft templates and automate infrastructure provisioning to safely enable everyone with self-service environments.

Presentation:
July 29, 2021

[Get updates >](#)

Module 6

Observability and Monitoring

This session will dive into strategies for knowing how elements of your applications interact and perform, when and where issues arise, and how to fix and prevent them.

Presentation:
Sept 15, 2021

[Get updates >](#)

<https://pages.awscloud.com/awsmp-h2-dev-aws-marketplace-devops-workshop-series.html>
