

Data-driven transformation in local government

Turn data into valuable insights

Data Strategy

The use of data in combination with AWS can have a significant impact on your business.

- Data is an essential asset of your business
- Starting small to prove value and gain confidence
- Build a platform for your current and future use cases
- With our help choose the right AWS building blocks
- Re-use common architectures and increase the speed for innovation.

Security will always be our top priority

- Our core infrastructure is built to satisfy the security needs for our most sensitive organisations.
- Backed by a deep set of security tools
- A shared responsibility model between our customers and AWS
- Best practices, encryption tools and other guidance
- Internationally recognised certifications and accreditations

AWS Technology Roadmap to the Future

- With AWS gain control over your IT environment
- Break free and enable innovation through AWS Cloud
- Define your own AWS cloud strategy and framework
- Build your AWS future proof skill set
- Realise your data use cases with AWS technology

Come with an idea
leave with a solution

Walter Maguire, Data Lab Architect

Customer need

AWS customers need **to build solutions** composed from multiple AWS services, and they want expert guidance from AWS in how to design and validate their architecture. And once they design it, they need **a roadmap for how to put that architecture to work** for their organization.

The solution

AWS Data Lab was created **to help bridge the gap** between technology and builders. Having customers engage in a Data Lab and learn directly from Data Architects and AWS experts **greatly reduces barriers** of adoption for quicker and more productive project implementation.

aws data lab

WHO?

- 4–8 customer builders
- Data Lab solution architect
- Databases & analytics experts
- Account solution architect

WHAT?

- Database Migration
- Data Lake foundation & innovation
- Predictive analytics
- Microservices deployment
- And many more

WHERE?

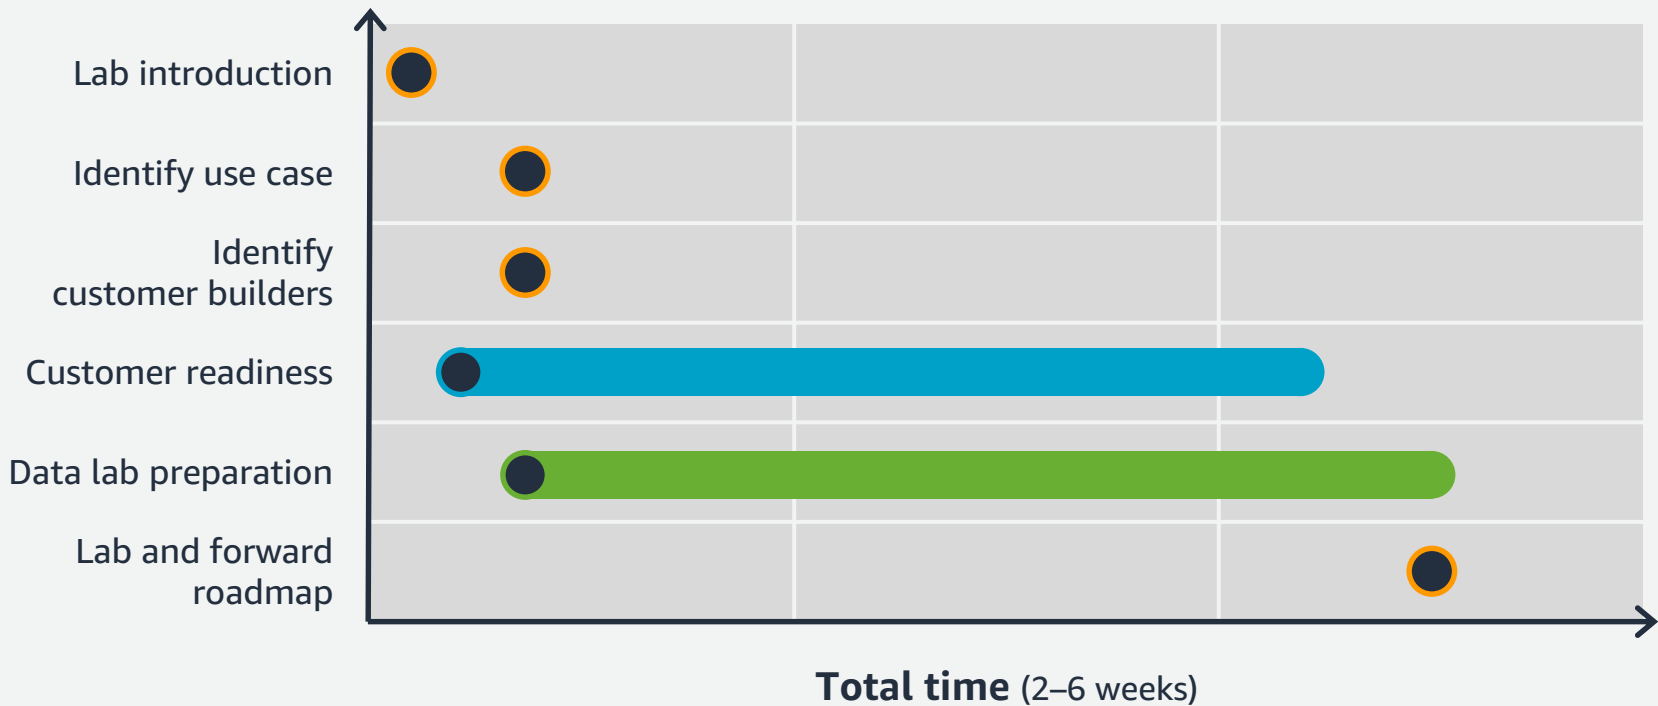

- Herndon, VA
- London, UK
- New York, NY
- Seattle, WA
- Bangalore, IN
- Online

HOW?

- 2-5 day engagement
- Architect solution
- You build in your account
- Learn from experts
- Validate functionality

Data lab high level timeline and milestones

Data Lab phases at a glance

Pre-lab

Prep calls to talk through:

- Business use case
- Technical use case
- Build team readiness
- Current environment
- Lab goals (MVP & stretch)
- Design notional architecture

Lab sprint

- Two to five day build
- Validate use case & goals
- Identify work threads
- Build solution
- Engage with experts
- Finalize build, demo, & roadmap
- Success measurement

Post-lab

- Post-lab DLA follow-up
- Go-forward roadmap
- Service team & expert engagement
- Outcome measurement
- Plan future projects

AWS Data Lab customers

Data lake for analytics

CHALLENGE

This United States military organization needed help to modernize their data architecture in order to keep up with an increasingly diverse stream of data and data types, and to create standardized frameworks for the collection, preparation and analysis of that data by a large group of users.

SOLUTION

During the Data Lab, the customer team built an S3 landing zone, using AWS Direct Connect to get data from their source systems, and built an ETL pipeline using AWS Glue for ETL and catalog. The team also built a searchable metadata store for the lake using DynamoDB and ElasticSearch. Finally, the team used Lambda to take data extracts from the lake and load them to Neptune for graph analytics

BENEFIT

Over the course of the week the customer team developed and iterated on many different pipelines and glue cataloging approaches and identified a successful approach. The team was able adjust to services that were available in GovCloud. This data lake served as the basis for a production deployment by the organization.

Data lake for analytics

CHALLENGE

This Canadian government security organization needed to develop the ability to use machine-learning to detect weapons in parcels. Their current methods were missing weapons, and they needed to dramatically increase the rate at which they could accurately detect them.

SOLUTION

During the Data Lab, the customer team was able to load 4 million images into two different machine-learning test environments for evaluation. They compared a manual approach and an automated approach with Amazon Sagemaker.

Benefit

The automated pipeline showed a 50% improvement in weapon detection. Also, the team was able to easily scale up their environment to improve performance and accuracy when they discovered that the initial tests used an undersized infrastructure.

**Canadian Government
Security Organization**

Helping builders build solutions faster!

Are you ready to start your Data Lab journey?

If so, here's your to-do list:

- 1) Complete the customer readiness checklist
- 2) Identify your ideal minimum viable product and stretch goals for the lab
- 3) Identify your build team
- 4) Identify the business goal or driver behind the lab – what does your business need from the lab?
- 5) Share this information with your account team so they can kick off the process and we can create a great Data Lab for you

Q&A

Thank you!
