

# Building for the Future with AWS Databases

Fireside Chat with Shawn Bice, VP of  
Databases

Hosted by Rich Hua, Principal Worldwide GTM  
Specialist

# A tale of two customers

# A tale of two customers

Don't let familiarity become a blind spot that stifles innovation

# Remember when . . .

# Building for the cloud

Order Processing

Product Catalog

Fraud

Data Lake

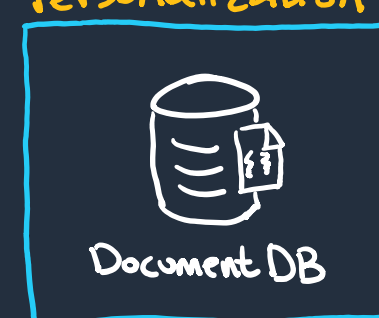

Shipment Tracking

Personalization

Analytics

# Moving to fully managed APIs

## Command Line Interface

```
aws rds create-db-instance  
-- engine postgres \  
-- db-instance-class db.t3.medium \  
-- storage-type gp2
```

## Command Line Interface

```
aws rds modify-db-instance  
-- db-instance-class db.M6.xlarge \  
-- multi-az \  
-- storage-type io1 \  
-- backup-retention-period 30 \  
-- apply immediately
```

*Rappi*

# Purpose-built databases

The most complete family of purpose-built databases

# Amazon Aurora

FASTEST-GROWING  
AWS SERVICE, EVER

MySQL and PostgreSQL compatible

Several times faster than standard MySQL  
and PostgreSQL

Highly available and durable

1/10th the cost of commercial-grade databases

# AWS helps customers achieve database freedom

## POWERFUL TOOLS

## ROBUST PROGRAMS

## AWS PROFESSIONAL SERVICES & PARTNERS

# Graviton2 instances lower TCO

Up to **35%** better performance than existing instance families

**11%** lower cost vs same-sized comparable instances

Fully-managed with easy scale compute

Up to 40% better price performance

# Amazon Aurora Serverless v2

Support the most demanding applications without managing database capacity

## Highly scalable

Scale instantly, from hundreds to hundreds of thousands of transactions, in a fraction of a second

## Save up to 90%

Scale capacity in fine-grained increments and save up to 90% of costs vs. provisioning capacity for peak load

## Highly available

Power your business-critical workloads with the full breadth of Aurora features, including Multi-AZ, read replicas, and Global Database

# AWS Glue Elastic Views

Easily combine and replicate data across multiple data stores

Create materialized views across data stores

Create **materialized views** across a wide variety of databases and data stores using **familiar SQL**

Keep data up to date

**Continuously monitors** source databases for changes and updates targets **within seconds**

No servers to manage

**Serverless** and automatically **scales capacity up or down** to accommodate your workloads

Reduce time & effort

Handles the heavy lifting of **copying and combining data** without requiring custom code

# Babelfish for Aurora PostgreSQL

Run SQL Server applications on PostgreSQL with little to no code changes

Keep existing queries

Translation layer enables Aurora PostgreSQL to understand Microsoft SQL Server's proprietary T-SQL

Accelerate migrations

Lower risk and complete migrations faster, saving you months to years of work

Freedom to innovate

Run T-SQL code side-by-side with new open source functionality and continue developing with familiar tools

# Babelfish for PostgreSQL (Open-Source Project)

An open-source project for Babelfish source code

**Customize and add  
new features**

Contribute to help steer the  
direction of Babelfish

**Available on GitHub  
in 2021**

Is community-driven and  
provides transparency into  
the feature roadmap

**Apache 2.0  
license**

Use it for any purpose, innovate  
and distribute your modifications  
with confidence
