

# Rapid & Secure Mission Delivery on AWS

## Move Faster

To outpace our adversaries, warfighters need modern software—innovations to meet changes in the environment and that meet shifting battlefield priorities. This same software needs to work, reliably, even as it modernizes, and without vulnerability to cyber attack. Rapid and secure mission delivery, driven by innovation in the cloud, is needed for **warfighter support at the speed of relevance**.

---

## Continuous integration/continuous delivery with static and dynamic testing

### Security

Audit vulnerability findings in a single pane-of-glass view

Securely deliver and deploy software to the edge

### Stability

Maintain operational stability and resilience with microservice architectures and auto-rollback functionality

### Speed

Move quickly to the cloud with templated infrastructure and pre-approved Authority to Operate

---

## Getting help

- AWS [Professional Services](#) or [Consulting](#) Partners build and implement AWS native architectures to benefit from AWS innovation leadership and continuously invent on behalf of our customers
- AWS [DevSecOps Technology Partner](#) offerings provide modular, turnkey options for elements of your software factory
- Options exist in [GovCloud](#), with [FedRAMP](#) moderate/high and [DoD SRG](#) IL4/IL5 certifications.

To understand how AWS can transform software delivery at the speed of relevance, contact your AWS account manager or [AWS Sales Support](#).
