

# VMware & AWS Partnership paves a faster, easier path to hybrid cloud with jointly engineered solutions

AWS is the largest public cloud provider

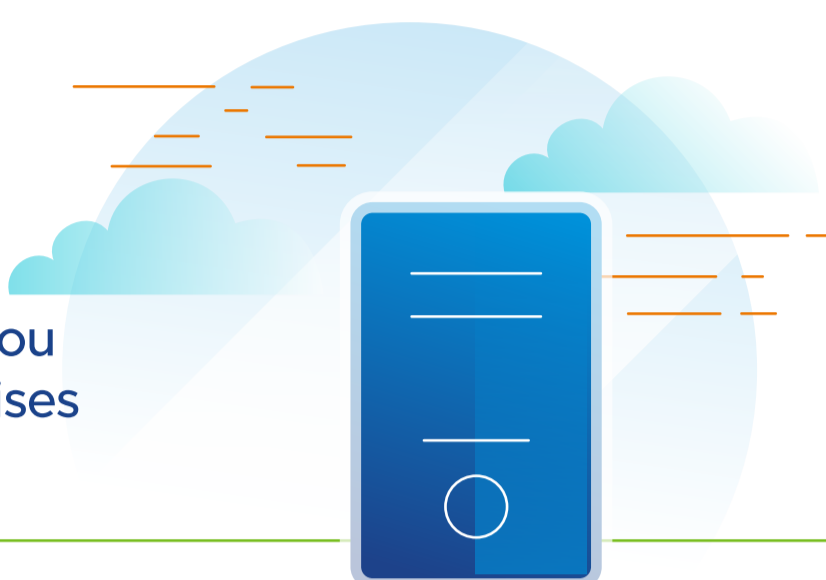

VMware is the #1 virtualization provider

VMware and AWS engineers work together to develop joint solutions

Use services where you need them, on-premises or in the cloud

Run secure cloud services in your data center, securely run your data center services in the cloud

Leverage the global scale from the largest provider of public cloud and the leading vendor for private cloud

Improve service experience with more options to develop, test, run or migrate applications across on-premises and in the cloud

Simplify management with consistent operations

Use consistent tools, APIs, management, security and operations policies for on-premises and cloud

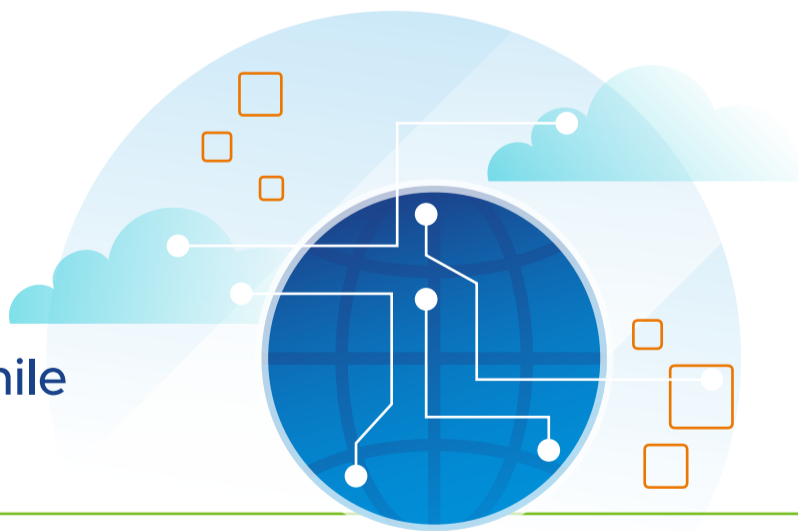

Leverage your existing infrastructure, IT skillset and proven processes

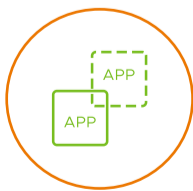

Streamline day-1 and day-2 operations for infrastructure, networking, VMs and containers across on-premises and the cloud

Build for the future while minimizing your risk

Unique, jointly engineered, low risk solutions for integrating public cloud and on-premises computing

Quickly migrate hundreds of apps with no refactoring and no downtime

Build modern apps to run alongside existing apps while taking advantage of a wide variety of AWS services
