

# GenAI - AWS + Tribe

# The GenAI Blueprint: Streamlined AI Deployment with AWS

Supercharge your business with generative AI in only four weeks

## *Everyone is asking:*

How do I begin leveraging generative AI for my business?

## *This is your answer*

The AWS Generative AI Blueprint. The blueprint is a standard, repeatable offering for developing generative AI solutions for customers on Sagemaker.

### Starting with a functional prototype

Starting by defining and building a functional prototype allows you to evaluate your core generative use case, test data integration, de-risk implementation, and begin to measure ROI. You will be able to make smarter decisions about your generative investments.

### In four weeks, customers will have

**1**  
A validated, high-value use case for genAI with demonstrated ROI

**2**  
A functional MVP and prescribed technical architecture using AWS

**3**  
A comprehensive plan for integrating it into an existing tech stack

### Select Services and Partners

Sagemaker

Amazon S3

Lambda Orchestrator

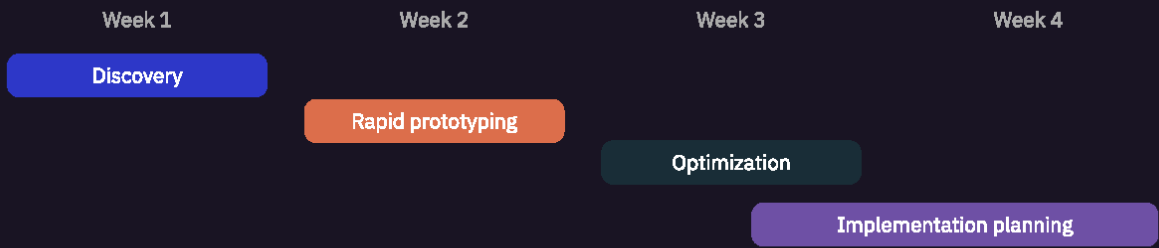

Amazon Kendra

---

## Path to functional prototype

### Week 1

Gain a deeper understanding of your organization's workflows to develop a clear success criteria for your generative product

### Week 2

Build a prototype tailored to the validated use-case. Test foundational models to select the one that delivers optimal results

### Week 3

Evaluate the performance of the prototype and adjust the approach, prompts, model, or data inputs to optimize outputs

### Week 4

Develop a comprehensive implementation plan, outlining the steps to transition your MVP into a full-scale production solution

## How to get started

You will align with Tribe AI on a desired use case. Tribe AI assembles a tailored team of generative AI specialists with deep expertise to transform the AI product journey.

The total cost of this 4 week engagement is \$50,000, which can be partially reimbursed via AWS credits so that it's minimal effective cost for the customer.

## Who is Tribe AI?

Tribe is your AI Lab — a data and machine learning specialist partner powered by an expert network of 300+ experienced AI researchers, engineers, and data scientists from top technical institutions. We enable organizations across industries to build data, machine learning, and generative AI solutions designed to address real business challenges.

### Specialization

We live in breath AI. not only do we specialize in AI services we also use proprietary AI tools to drive our business

### Experience

Tribe has been deploying AI solutions long before "generative AI". We've build customer technology and repeatable processes to deploy AI at scale.

### Talent quality

We're active practitioners and builders, not career consultants. Tribe has highest concentration of top AI and large language model talent outside of FAANG

### Speed

We move at the pace you need to win, with immediately available capacity and a constantly growing and refreshing pool of talent
