Know What To Expect

Here's what to expect from the actual exam, which costs \$150 USD and allows for 130 minutes to complete:

Response Types

There are two types of questions on the examination:

- Multiple-choice: One correct response and three incorrect responses (distractors).
- Multiple-response: Two or more correct responses out of five or more options.

Select one or more responses that best complete the statement or answer the question. Distractors are plausible response options for the content area that an examinee with incomplete knowledge or skill would likely choose. Unanswered questions are scored as incorrect; there is no penalty for guessing.

Unscored Content

Your examination may include non-scored questions that are placed on the test to gather statistical information. These questions are not identified on the form, and do not affect your score.

Exam Results

- This is a pass or fail exam scored against a minimum standard established by AWS professionals guided by certification-industry best practices and guidelines.
- Your results are reported as a score from 100 - 1000, with a minimum passing score of 720. Scaled scoring models are used to equate scores across multiple exam forms that may have slightly different difficulty levels.
- Your score report contains a table of classifications of your performance at each section level. You do not need to "pass" the individual sections, only the overall examination. Each section has a specific weighting, so some have more questions than others. The table contains general information to highlight your strengths and weaknesses.
